

Bath Garden Club Presents
"The Psychology of Bees"

Dr. Catherine Plowright is a professor in the School of Psychology at the University of Ottawa. Her research has focused on learning and choice making in small animals, birds and especially bumblebees, and how they forage for food in the natural environment. She has studied how such animals recognize visual patterns such as flowers and develop a preference for certain flowers. As such, her research gives her a unique perspective on understanding how bees are attracted to different garden environments and how we can promote pollination through plant choices.

When – Monday , October 19, 2020

Time – 2:00

Where – From the comfort of your own home via Zoom

Please contact bathgardeningclub@gmail.com to register

Non members are welcome; however, we invite you to join us for only \$10 per year. Visit www.bathgardeningclub.com to see what we are all about.
